

Getting Technical

I have blogged recently on writing styles, and covered the conversational writing style. Some people would question whether this style is appropriate for technical articles or those with a scientific nature. If the articles are for general viewing or general content, I would definitely say that a conversational tone in your writing is the way to go. If content is about a technical subject that is all the more reason to make it easy to read. This can be done by adjusting the style to suit a broad audience. Even adding some humor amongst the jargon can help make an article more enjoyable to read. Writing in this way in this way will help to ensure that your work can be enjoyed by the widest demographic possible. {htmlfix} {/htmlfix}
